ACTIVITY 31

decode the chart

chart 1 - Regional comparison

• what it tells :-

It compares attendance in Patna, Madurai and Hyderabad.

• observation :-

Hyderabad has the highest attendance and Patna the lowest.

• Do I trust it? No, not fully.

• why? The y-axis starts at 770 instead of 0, which makes the differences look much larger than they actually are.

chart 2 - vote share by party

• what it tells :-

It shows the vote-share distribution among 10 parties / categories.

• observation :-

Different parties have different shares.

• Do I trust it? Not fully.

• why? The chart does not clearly provide party names or exact percentages, so it is difficult to verify the information.

chart 3 - cheese consumption vs. Bedsheet Tangling Deaths

what it tells:-

Both cheese consumption and bedsheet - tangling deaths appears to increase over time.

observation:-

The two lines move similarly.

- Do I trust it? No.
- why? similar movement does not prove that cheese consumption causes deaths.

chart 4 - coffee cups / Day vs. Typing Speed

what it tells:-

It shows the relation ship between coffee consumption and typing speed.

observation:-

The points are widely scattered, mostly around 40-70 cups/day and 30-70 WPM.

- Do I trust it? Yes with caution.
- why? It shows the actual spread of many observations, but there is no clear strong relationship between coffee and typing speed.
